OUR STORY

Welcome to Step by Step Products, your trusted source for high-quality, affordable home improvement and building products. We, the owners of the company, being the real estate developers, have experienced issues finding quality finishing materials for reasonable prices for our projects. So, we decided to take matters in our own hands and that is how the company was created and our journey began.

Our first step was to manufacture solid oak open stringer stair treads and we are pleased to offer you our line of products in our catalog. We were able to find the proper oak lumber suppliers and that allowed us to provide our clients with affordable prices without compromising on quality.

When we added the custom metal fabrication and became a full service open and mono stringer builder. While the metal part of the stair set is based on case-by-case basis in terms of price and lead times, the wood half is more streamlined.

Our product catalog will be constantly expanding, providing more innovative solutions for your home enhancement projects. Step by Step, we are planning to add more products including exterior wall cladding, fencing, interior paneling and more.

Floating Stair Systems and Mono Stringer Stair Treads

Dear Client,

Embrace the rising trend of floating and mono stringer staircases with STEP BY STEP PRODUCTS, where innovation meets accessibility. No matter if you choose to order a full stair system or treads only, we've got you covered!

The metal part of the stair sets is always custom built to customers' specs.

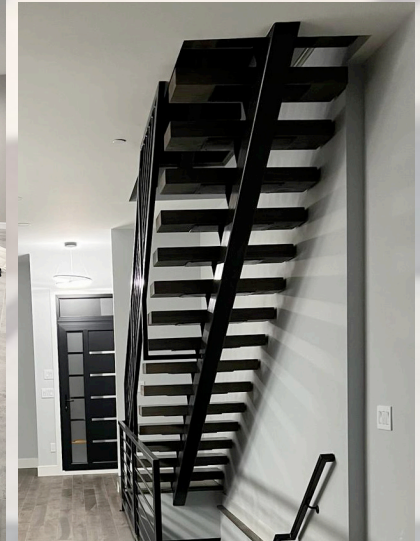

Our treads can be purchased separately from the metal stringers. The treads come in a variety of standard sizes. Custom nonstandard sizes or landing platforms are available as special orders. All our treads are comprised of full width solid boards providing the seamless look of the top and bottom of treads.

We only use quality kiln dried lumber, proper wood filler and glue.

With this level of quality, our products' prices are very competitive. Our commitment to excellence, combined with affordability, sets us apart in delivering the perfect staircase solution for your project.

*At Step By Step, we believe that natural wood colors and visual textures add character to our products. With that in mind, we do our best to match the grain and color of all of our wood products as closely as possible. However, due to the natural variation of wood products, using glue and wood filler for joints there may be instances in which a perfect grain and color match is not possible. By ordering our treads, you acknowledge that you are receiving a uniquely crafted product and there may be some variation in the grain and color of your wood products. This product is designed for interior use only. Before choosing the size of your treads, please make sure that your stair system will comply with your local building codes.

Rectangular Solid

This type of tread provides a bold appearance and will add a wow factor to your space. Some customers choose to use these treads for shelves, mantels, or even counter tops.

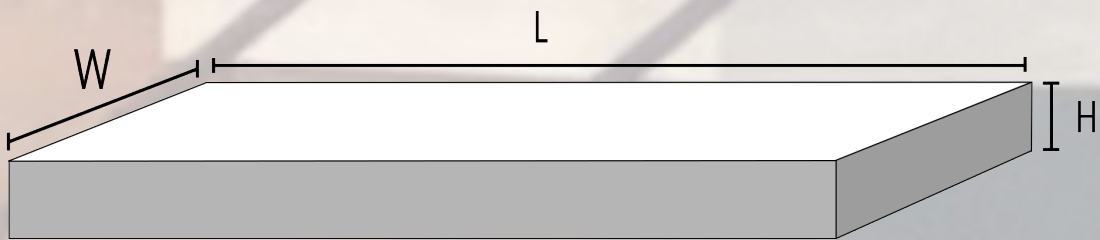

We have 2 main compositions:

Option 1: 3 to 5 solid full width pieces of oak boards (depending on thickness) face-glued together horizontally.

Option 2: Both top and bottom pieces are full width, the inner layers are comprised of multiple pieces joined together.

Both options come 1/4" round over all edges. Stain grade finish. The treads come in a variety of sizes to match our customers' needs.

ROR-2-11-48	Red Oak	Rectangular	2"	11"	48"	\$260

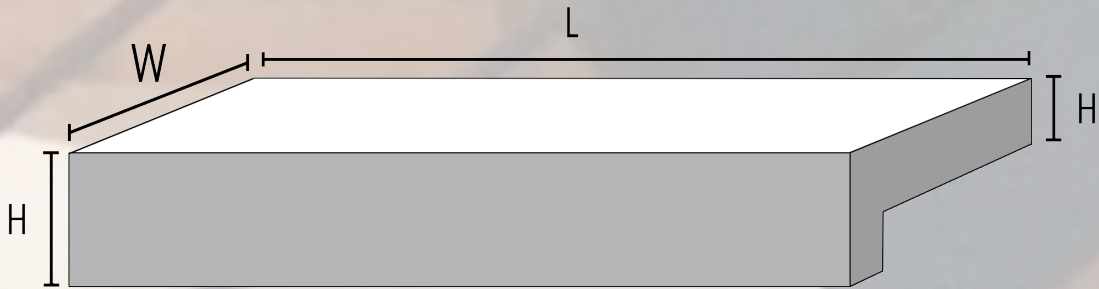

L - Shaped Solid

This type of tread provides a much lighter appearance than the rectangular solid type, but the beauty of it is that the front 4" lip will make these steps meet the strict building code in terms of the allowed clearance between steps. Please check your local building code.

The top part is comprised of 2 solid pieces of oak boards face-glued together horizontally. Additional 3 pieces create the front lip. 1/4" round over front edge. Stain grade finish.
